SUMMARY

AI Engineer with 8 years of software engineering experience, currently specialized in Agentic AI and Generative AI applications (LLMs, RAG, multi-agent systems) over the past 2 years. Brings a strong MLOps foundation from 4 years building and deploying Machine Learning applications, backed by an additional 4 years of full-stack development experience, a well-rounded background spanning the full stack from UI to model deployment to autonomous agents.

TECHNICAL SKILLS

Languages & Frameworks: Python, JavaScript, React, FastAPI, Django, Airflow, API Development, Webhooks

Databases: PostgreSQL, MongoDB, Redis, Kafka, Qdrant, PGVector, BigQuery, Redshift, Vector Search

ML & AI: LLMs, RAG, LangChain, LangGraph, Vertex AI, Langfuse, Semantic Search, Hybrid Retrieval, Reranking, Prompt Engineering, Model Monitoring

Cloud: AWS, GCP, Kubernetes, Docker, Terraform, Jenkins, CI/CD, IAM

EXPERIENCE

Independent AI Engineer | *Independent AI Engineer*

Remote | Apr 2026 – Present

- Working as a consultant designing and building AI systems, RAG-based chatbots, and multi-agent systems using Python, LangChain, LangGraph, and FastAPI, with a focus on rapid prototyping and scalable deployment.

Aptos India | *Machine Learning Engineer*

Bangalore, India | Jan 2023 – Mar 2026

- Architected a Kubernetes-native ML orchestration control plane with workload-aware scheduling and checkpoint-based recovery for SLA-bound production environments serving 100+ global retailers.
- Designed secure, fault-tolerant data pipelines on GCP with IAM-based access controls and audit logging, improving processing SLAs by 35% while cutting compute costs 60% (about USD 240K annual savings).
- Built an enterprise-grade RAG support assistant integrating internal knowledge bases with prompt versioning and monitoring, reducing hallucinations by 35%.

Turing.com | *Senior Software Engineer*

India (Remote) | Apr 2022 – Dec 2022

- Designed and implemented production-grade ML pipelines using Airflow for ingestion, training, validation, and automated deployment, with standardized CI/CD and model versioning practices that reduced deployment time by 60%.
- Integrated monitoring and validation checks to enhance production reliability and maintainability of deployed ML systems.

Clickpost Pvt. Ltd. | *Senior Software Engineer*

Bangalore, India | Apr 2021 – Apr 2022

- Designed and built a high-accuracy financial reconciliation system processing large-scale transactional datasets for 1,000+ enterprise customers with strict data integrity requirements.
- Reduced reconciliation cycle time by 95% (from about 2 days to minutes) through parallelized processing and automated validation workflows.

PROJECTS

- ChatDB** – Your personal Data Analyst.
- FluxBox** – MacOS menu bar utility built with Rust and Tauri.

EDUCATION

Indraprastha University | *B.Tech. – Computer Science Engineering*

New Delhi, India | 2014 – 2018
