SUMMARY

Senior AI/ML and backend engineer with 8+ years of experience building production-grade intelligent systems, from data and API platforms to LLM-powered applications. Strong track record in Python-first microservices, RAG architectures, prompt engineering, and humanization-focused output quality evaluation across enterprise environments. Hands-on with cloud-native MLOps on GCP/AWS and building AI content systems aligned with SEO/GEO objectives for relevance, quality, and scalability.

TECHNICAL SKILLS

AI/ML: LLMs, RAG, LangChain, LangGraph, Model Monitoring

Cloud & Infra: Azure (AKS, App Services), AWS, Kubernetes, Docker, Terraform

Data & Backend: Python, SQL, Kafka, Redis, PostgreSQL, FastAPI, Django

MLOps: CI/CD, MLflow, IAM, Audit Logging, Encryption, SLA Monitoring

Automation: n8n (workflow automation), API integrations, Webhooks

EXPERIENCE

Aptos India

Machine Learning Engineer

Jan 2023 – Present

Bangalore, India

Project: Aptos One – Leading unified commerce platform used by 100+ global retailers, processing billions of transactions annually.

- Implemented a backend control service with APIs to create, monitor, restart, and manage ML jobs on Kubernetes, supporting workload-based node selection and checkpoint-based restarts.
- Architected distributed data pipelines using Python, BigQuery, and GCP, reducing batch processing runtime by 40% and improving data availability SLAs by 35%.
- Optimized cloud infrastructure and BigQuery query execution, reducing overall cloud costs by 60% (about USD 240K annual savings).
- Modernized legacy monolithic services into scalable cloud-native components, improving scalability, fault tolerance, and maintainability.
- Technologies: Python, Django, GCP, SQL, Docker, Kubernetes, CI/CD, Redis, Terraform, BigQuery

Project: LLM-Based Customer Support Chatbot (POC) – Internal AI chatbot prototype for a B2B retail analytics dashboard.

- Designed and built an end-to-end LLM-powered chatbot using open-source models and managed cloud AI services, reducing dependency on manual support teams by 30%.
- Integrated internal knowledge bases and analytics metadata with RAG workflows and prompt optimization, reducing incorrect answers by 35%.
- Deployed the solution via containerized MLOps workflows, enabling rapid experimentation and scalable inference.
- Technologies: Python, RAG, LangChain, Vertex AI, LLMs, FastAPI, Vector DB, Prompt Engineering, Docker, LangGraph, MLOps

Turing.com

Senior Software Engineer

Apr 2022 – Dec 2022

India (Remote)

Project: End-to-End ML Deployment Platform – US-based remote talent platform enabling AI-driven analytics and automation at scale.

- Designed and implemented end-to-end ML pipelines using Airflow for data ingestion, training, and automated production deployment.
- Reduced model deployment time by up to 60% through standardized MLOps practices.
- Technologies: Python, Django, Airflow, GCP, Docker, MLOps

Clickpost Pvt. Ltd.

Senior Software Engineer

Apr 2021 – Apr 2022

Bangalore, India

Project: Cash Reconciliation Automation Platform – SaaS logistics platform serving 1k+ enterprise customers handling CoD orders.

- Designed and built a financial reconciliation system from scratch, processing high-volume transaction data with strict accuracy requirements.
- Reduced reconciliation cycle time by 95% (from about 2 days to minutes) by automating reconciliation logic and parallelizing transaction processing, improving operational efficiency and cash flow visibility.
- Automated large-scale CSV ingestion and backend APIs for financial data processing, supporting rapid business growth.
- Technologies: Python, Django, PostgreSQL, CSV Pipelines, AWS, AWS Redshift, Docker, Kubernetes, Pandas, Kafka

Veda Labs Pvt. Ltd.

Software Engineer

Jul 2018 – Apr 2021

New Delhi, India

Project: Video Analytics Platform – Computer vision platform deployed on-premise for retail analytics using CCTV footage.

- Developed containerized video analytics pipelines for edge devices.
- Built a Kafka-based streaming architecture for scalable, real-time processing.
- Technologies: Python, OpenCV, Computer Vision, Kafka, Docker

PROJECTS & PORTFOLIO

Stateful AI Travel Agent (LangGraph): Built a memory-aware, graph-orchestrated multi-agent system for dynamic planning and tool-based reasoning.

- **Github:** github.com/raunaqness/ai-travel-agent
- **Demo:** <https://ai-travel-agent.fly.dev/>

Workflow Automation Platform (n8n + Azure): Deployed containerized AI-assisted workflows integrating APIs and LLM services for secure process automation.

EDUCATION

Indraprastha University

Bachelor of Technology – Computer Science Engineering

Aug 2014 – Jun 2018

New Delhi, India
