SUMMARY

AI/ML and backend engineer with 8+ years of experience building production systems across ML platforms, high-volume data pipelines, and LLM applications. Strong track record in Python, cloud infrastructure, RAG systems, and reliable software for sensitive, high-stakes workflows with auditability, resilience, and scale requirements.

TECHNICAL SKILLS

AI/ML: LLMs, RAG, LangChain, LangGraph, Agentic AI, prompt evaluation, model monitoring

Backend & Data: Python, FastAPI, Django, SQL, PostgreSQL, Redis, Kafka

Cloud & Infra: GCP, AWS, Kubernetes, Docker, Terraform, CI/CD

Systems: distributed pipelines, workflow orchestration, n8n, audit logging, access control

EXPERIENCE

Aptos India

Jan 2023 – Present

Machine Learning Engineer

Bangalore, India

- Built Agentic AI applications and workflow automation systems using LLM orchestration patterns and n8n, enabling multi-step task execution, API integrations, and reliable human-in-the-loop workflows.
- Built a Kubernetes-native ML control plane for workload-aware scheduling, checkpoint recovery, and production job lifecycle management in SLA-bound environments.
- Designed enterprise RAG and LLM workflows over internal knowledge and analytics metadata, improving response quality and reducing hallucinations by 35%.
- Architected secure data pipelines on GCP with IAM controls, auditability, and observability; improved processing SLAs by 35% and reduced cloud spend by 60% (about USD 240K annually).

Turing.com

Apr 2022 – Dec 2022

Senior Software Engineer

India (Remote)

- Implemented end-to-end ML pipelines for ingestion, training, validation, and deployment using Python, Airflow, Docker, and GCP, while standardizing CI/CD and model versioning workflows that cut deployment time by 60% and improved production reliability in a remote-first engineering environment.

Clickpost Pvt. Ltd.

Apr 2021 – Apr 2022

Senior Software Engineer

Bangalore, India

- Built a high-accuracy reconciliation platform for large transactional datasets, reducing cycle time by 95% from days to minutes.
- Developed scalable backend APIs and ingestion pipelines with strong data integrity, traceability, and operational reliability requirements.

Veda Labs Pvt. Ltd.

Jul 2018 – Apr 2021

Software Engineer

New Delhi, India

- Developed containerized computer-vision pipelines and Kafka-based streaming systems for real-time analytics workloads.

PROJECTS

Stateful AI Travel Agent: Built a memory-aware multi-agent system with LangGraph, tool orchestration, and persistent conversational state. GitHub | Demo

EDUCATION

Indraprastha University

Bachelor of Technology – Computer Science Engineering

Aug 2014 – Jun 2018

New Delhi, India
